

American Geophysical Union

1919-1965

The American Geophysical Union (AGU) was organized in 1919 to represent the US in the International Research Council's International Union of Geodesy and Geophysics and to serve as the National Research Council Committee on Geophysics. In both of these capacities, the AGU promoted work in the fields of astronomy, geodesy, geology, meteorology, seismology, terrestrial electricity and magnetism, and vulcanology. In 1972 the AGU separated from the National Academies and incorporated as an independent organization.

The American Geophysical Union collection contains correspondence, reports, and meeting minutes covering the years 1919-1965 for a span of 7 linear feet. The collection is arranged in two major divisions: 1919-1939 and 1940-1965.
